PART 1

Getting Started

What Ignition is, how to sign in and get around, and what your role can see.

Welcome to Ignition

MARKETER LEAD ADMIN

Ignition is the influencer-marketing CRM for Legend of Toys. It tracks the creators we work with and every deal we run with them, from first contact through the live post and its results. This manual is your self-serve guide to every screen in it.

The two things Ignition tracks

Influencers	The people and channels we work with: their reach, contact details, quality rating, and which list they sit on (the proven roster, the parked B-List, or archived).
Engagements	A single deal with one influencer (also called a "deal"). Each engagement moves through a pipeline of stages and records the terms, costs, logistics and performance.

How a deal flows

Every engagement moves along a pipeline. The happy path runs: **Proposed → Planning → Shipped → Delivered → Draft received → Scheduled → Live. Live is the finish line** for a video deal — the video is up, the deal is done. A deal that does not work out exits to **Ghosted**, **Dropped** or **Cancelled**, and **On hold** and **Delayed** are there for a deal that has stalled without dying.

> ⓘ DROPPED COSTS MONEY. CANCELLED DOES NOT.
>
> The difference matters, because it decides whether the deal shows up in your spend. **Dropped** is a loss: the goods went out and never became a video, so its cost keeps counting in Reports, monthly spend and CPM. **Cancelled** is for a deal called off *before anything was spent* — postponed, or stopped before the products shipped. A cancelled deal keeps its record but is left out of every total, and it will never be chased as overdue to post.

You can move a deal to any stage, in any order — real deals do not queue politely — with **one exception**: a deal starts in **Proposed** and cannot move on until it is **approved**. Approving it sends it straight to Planning, so you never have to approve and then advance it as two separate jobs. You can still drop or ghost a proposal you are turning down without approving it first.

ⓘ TWO BADGES, TWO MEANINGS

Watch for two colour systems. A **stage** badge shows where a deal is in the pipeline (orange means it is Live or being Tracked, the “money on air” stages). A **rating** badge (Green, Yellow, Red, Unrated) is your quality judgment of an *influencer*, not a deal. Do not confuse them.

How to use this manual

Each chapter covers one screen: what it is for, how to read it, and what to do. Jump to the screen you are on using the Contents page or your PDF reader’s bookmarks. Chapters are tagged with the roles that use them:

MARKETER LEAD ADMIN

⚠ SOME SCREENS ARE STILL BEING BUILT

Ignition is live but a few screens are deliberately partial today (marked “Phase B” in the app): Reports, Campaigns and parts of Discount Codes show data but do not yet have full create/edit tools. Each chapter says clearly what works now.

Signing In & Getting Around

MARKETER LEAD ADMIN

Ignition opens with your work Google account and everything sits in one slim icon rail. This chapter covers signing in and finding your way around.

Signing in

Open `ignition.legendoftoys.com` and sign in with your `@legendoftoys.com` Google account. Personal accounts are refused; if sign-in loops, sign out of any personal Google account first or use a fresh browser profile.

The menu

GROUP	WHAT LIVES HERE
WORK	Dashboard, Connects, Influencers, Engagements, Schedule, Payments. (New Deal is the orange **+ New deal** button in the top bar.)
LISTS	Roster, B-List, UGC, Campaigns, Codes.
ANALYZE	Reports (for leads and admins) and Targets.
HELP & ADMIN	System Manual for everyone; Users and Import for admins only.

You only see the groups your role allows. Most list screens have a search box, and amounts are shown in rupees (₹).

The rail and the top bar

On a desktop the menu is an **icon rail**. It starts collapsed (icons only; hover an icon for its name). Click the panel button at the top of the rail, or press `[` on your keyboard (when you are not typing in a box), to expand it to show the labels. Ignition remembers your choice on that browser. Your name sits at the bottom of the rail; clicking it asks you to confirm before signing you out.

The **top bar** holds the **search box**, **+ New deal** and the app launcher. The search box looks across Ignition: type two or more letters of an influencer's name, handle, code or phone, a deal number, tracking id or video link, or a campaign name, and the matching records appear as you type, grouped as Influencers, Deals and Campaigns. Click one, or use the arrow keys and Enter, to open it. Press Cmd/Ctrl+K on any page to jump into the box. B-List influencers are included; archived ones are not.

Connects are never searched here; use the Connects page. **Esc** closes the dropdown, and a second **Esc** clears the box. A page's own search box still filters that page, and `/` jumps your cursor into it. On a phone, tap the magnifying glass at the top and global search opens as a full-screen sheet.

Page boxes come in two kinds. On **Engagements** and **Influencers** the box shows a dropdown of matches while the list underneath filters as you type. On **Connects, Campaigns, Payments, Roster** and **User Roles** the box filters the rows already loaded, and every word you type must match somewhere in the row.

On a phone

At 767 pixels wide or less the rail is replaced by a **bottom tab bar**: **Home** (Dashboard), **People** (Influencers), **Deals** (Engagements), **Schedule** and **More**. More opens a sheet with the full menu, grouped like the rail, including New Deal.

> ⓘ SCREENS LOAD ONCE
>
> Ignition screens load their data when you open them and do not refresh on their own. To see new information after something changes, change a filter or reopen the page. Most lists show up to 100 or 200 rows; if a list looks cut off, narrow it with the search box or filters.

Roles & What You Can See

MARKETER LEAD ADMIN

Ignition gives each person the access that matches their job. This chapter explains the three roles used throughout this manual.

The three roles

MARKETER	**Marketing Team.** Runs deals day to day: searches influencers, opens engagements, advances them through the pipeline, sets quality ratings and adds notes.
LEAD	**Lead.** Everything a marketer does, plus access to the Reports. **Leads do not approve deals** — final approval sits with the Marketing head (admin) since 26 Aug 2026.
ADMIN	**Admin.** Full access, including the admin screens (the user-roles reference and the data-import runbook).

ⓘ HOW ACCESS ACTUALLY WORKS

Ignition uses the shared company permission map. The relevant permissions are `ignition_view`, `ignition_manage`, `ignition_approve`, `ignition_reports_view` and `ignition_admin`, bundled into the **ignition_manager** and **ignition_lead** roles (admins get everything). `ignition_approve` **is admin-only**: it is what lets someone sign off a proposed deal, and everyone else keeps `ignition_manage`, so they can still create deals and move them along. Roles are actually *assigned in Garage* (the store app) at its Users screen, not inside Ignition. If you cannot reach something you should, ask an admin to set your role there.

PART 2

Work

The dashboard, the influencer roster, the deal pipeline, and working a single engagement.

Dashboard

/dashboard MARKETER LEAD ADMIN

The Dashboard is Ignition's overview and the landing screen when you sign in: the state of the deal pipeline, this month against target, what is late, and who is worth re-booking.

WHAT IT'S FOR	READ OR ACT?	WHO	TOGGLE
Pipeline health at a glance.	Mostly read; Re-book starts a deal.	MARKETER LEAD ADMIN	Video · UGC · All.

The greeting and the Video / UGC / All toggle

The page opens with today's date and week and a one-line headline: how many posts are late, or how many drafts are waiting for review, or "All clear". The **Video / UGC / All** toggle at the top right switches the pipeline and the figures below it between video deals, UGC deals, or both together. **Video** is the default.

The pipeline

The wide **Pipeline** card shows the number of active deals and the rupees **committed** (the total cost of the deals in the selected view). Under it a coloured bar splits the deals by stage, with a count under each stage name along the happy path (Proposed through Live; UGC uses its own stage names). Click the card to open Engagements.

The tiles

TILE	MEANING
Organic views	Views for the selected view, with paid (ad) views shown as a hint beneath.
Live (done)	Deals that have reached Live.
Views vs target	This month's views against the target set on Targets, with a progress bar.
Spend vs budget	This month's spend against the budget. If no target is set for the month, a link to Targets appears instead.

TILE	MEANING
Blended CPM / Median CPM	All-time, over deals with views. Blended CPM is the cost of those deals divided by their organic views, times 1,000; Median CPM is the middle deal's CPM. Commission and ad rights are left out.

The UGC view adds UGC deals, budget consumed, likes, orders and sales (coupon, net). The All view adds Ghosted, total likes, total shares and the count of non-compliant deals.

Overdue posts and Re-engage

Overdue posts lists deals whose expected post is late, with how many days. People who can manage deals also get **Flag overdue as red**, which rates those creators Red. Click a row to open the deal.

Re-engage lists Green-rated creators who have been idle 60 days or more, with a count of gifted-but-never-posted deals and the unrecovered value. Each row has a **Re-book** button (for people who can manage deals) that opens **New deal** with that influencer already selected. Click the name instead to open their profile.

> ⓘ FIGURES LOAD ONCE
>
> The Dashboard loads when you open it and does not refresh by itself; reopen the page to update it.

Connects

/connects MARKETER LEAD ADMIN

Connects holds the conversations that Pitstop customer support has handed over to Ignition, usually creators who messaged the brand. From here you read the thread, reply, and turn a creator into an influencer record.

WHAT IT'S FOR	READ OR ACT?	WHO	NEEDS
Replying to transferred creator chats.	Act: reply, link, set status.	MARKETER LEAD ADMIN	The Connects permission.

The list

Each row is one conversation: who it is, the channel (Instagram, Messenger, WhatsApp or Email), the last message, how long ago, a status pill, and either the influencer code it is linked to or **Not linked**. An **Awaiting reply** tag marks threads where the customer spoke last. The search box filters the loaded conversations; every word must match. Filter by channel with the buttons and by status with the dropdown. The heading shows how many are **New** among the latest 200 conversations loaded.

Statuses

STATUS	MEANING
New	Handed over and nobody has dealt with it yet.
Replied	You are working the conversation.
Linked	The conversation has been tied to an influencer record.
Closed	Finished; nothing more to do.

Change a status from the dropdown in the **Details** card on the conversation. **Linked** cannot be picked by hand; it is set only by creating or linking an influencer (Promote, below), so the option stays greyed out until the thread has an influencer.

Working a conversation

1. **Read the thread.** A thread shows its latest 500 messages, with times in IST; internal notes appear in a dashed box with the author's name.

2. **Reply.** Type in the box and press **Send**, or press **Cmd+Enter** (Ctrl+Enter on Windows). Plain Enter just adds a new line. Replies go out through Pitstop's channel. On Instagram, Messenger and WhatsApp the box locks when the customer's 24-hour reply window has closed; email has no such window.

3. **Link to an influencer.** If the thread is not linked, **Create influencer** (Promote) first looks for an existing influencer with the same Instagram handle, phone number or email (archived ones are ignored). If one exists, the thread is linked to it and a toast says *Linked to existing INxxx*; otherwise a new record is made from the thread's handle, phone or email. Once linked, the card shows the influencer code and a link to the profile.

4. **Hand it back if needed. Send back to Pitstop** asks you to confirm, then returns the conversation to the support team's inbox and removes it from Connects.

> ⚠ CHECK THE CODE IN THE TOAST
>
> Matching is by handle, phone or email, so a creator known under a different handle and number can still get a new record. Read the toast: "Linked to existing" means no duplicate was made.

Influencers

`/influencers` MARKETER LEAD ADMIN

Influencers is the searchable roster of every creator and channel we know. From here you open a creator's profile, see their deal history, and set the quality rating that guides whether we work with them again.

WHAT IT'S FOR	READ OR ACT?	WHO	LISTS
Browsing creators and rating them.	Read; set the quality rating.	MARKETER LEAD ADMIN	Master · B-List · Archived.

Profiles with no usable link

A strip at the top of the list counts influencers whose **channel link** is not a real web address — usually a browser tab title pasted by mistake, like "(9) Instagram". These break profile matching and can make one person look like several. Click **fix these** to work through them.

Where the handle is clear, a suggested link is offered and one click accepts it. Where it is not — a display name rather than a handle, or a YouTube channel — there is a box to paste the real profile URL.

> ⚠ CHECK THE SUGGESTION BEFORE ACCEPTING IT
>
> A suggestion is built from the handle, so it can point at somebody else entirely if the handle is a common word. It is never applied on its own; that click is you confirming it is the right person.

The list

Tabs split influencers into **Master**, **B-List** and **Archived**. Each row shows the code, channel (and person), type (nano, micro, macro, brand, store), category, reach, location, and a **rating** badge. Search by code, handle, name, phone or email (a dropdown of matches appears while the list filters as you type), and filter by type and rating. Click a row to open the profile. Above the table, a row of cards counts creators by type (click one to filter by it) beside a Total reach card. The **+ New** menu at the top right offers **Add influencer** and **Add deal**.

Location

When you add or edit a creator, **Location** offers a list of cities and states as you type. Pick one where you can — typing the same city three different ways is what left Bengaluru sitting in the filter four times

over, each version finding a quarter of the people. If the creator's town is not on the list, type it anyway: the field accepts anything, and a known spelling is tidied up for you when you move on (BLR becomes Bangalore, Kerela becomes Kerala).

The profile, and the rating

A creator's detail page shows their identity and contact details, and a table of all their engagements. Its key action is the **quality rating**: four buttons in the header set the creator to **Green**, **Yellow**, **Red** or **Unrated**. This is the team's signal on whether a creator is worth working with again, and it drives the rating filter and the Roster.

> ⚠ RATING SAVES INSTANTLY
>
> Clicking a rating button saves immediately with no confirmation, so a wrong click is live at once: just click the correct one to fix it. "First invite: Not sent" on the profile means no invite has gone out to that creator yet.

Engagements

`/engagements` MARKETER LEAD ADMIN

Engagements is the deal pipeline: every influencer deal we are running, filterable by stage and type. From here you browse deals and start new ones.

WHAT IT'S FOR	READ OR ACT?	WHO	TABS
Browsing the deal pipeline.	Read; start a new deal.	MARKETER LEAD ADMIN	All · Live · Scheduled · Draft rcvd · Delivered.

Reading it

Tabs give quick stage filters (All, Live, Scheduled, Draft rcvd, Delivered). Each row shows the engagement number, the influencer (channel + code), type (**Video** or **UGC**), the current **stage** badge, the **deal** type, the **product and its variant**, the expected post date, the actual post date, views, CPM and total cost. A small amber ⚑ beside an engagement number means that deal is **not attached to any campaign** — hover it for the reason. It is there so a missing campaign is catchable while you scan the list, rather than only when you go looking; the **campaign** filter's *No campaign* option gives you the same deals as a filtered view, with a count. A small green ✓ after the engagement number means the deal is **Complete** (hover it for "Complete — all metrics captured or explained"); nothing is shown for a deal that is not complete, since most rows are not even live yet. Search by engagement number, video link, tracking or order; the box also shows a dropdown of matching deals (any deal, not only the current tab) that opens the deal directly, while the list filters as you type. On the **All** tab, stage chips let you pick several stages at once; on the other tabs the tab itself sets the stage.

The four tiles

Above the table sit four tiles — **Deals**, **Total cost**, **Views** and **Blended CPM**. They always describe *exactly the rows you are looking at*, so filter the list down to a product, a stage or a date range and the tiles re-count for that selection. **Blended CPM** is the cost of the deals that have views, divided by their organic views, times 1,000. **Median CPM** is the CPM of the middle deal. Commission and ad rights are left out of the cost. A **Median CPM** tile sits beside it, and the old "Avg CPM" is gone. Both only use the deals that actually have views; deals that have not posted yet are left out of it, otherwise their cost would make the CPM look worse than it is.

Filtering

Beyond the tabs and stage chips there is a **deal type** filter (Paid, Barter, Affiliate, Paid + Affiliate), a **product** filter (multi-select, the products actually on deals, with a count each), a **campaign** filter, a **Completion** filter (All / Complete / Not complete) beside the date filter, and a **posting-date** filter with four modes. All of them combine — pick Barter and a campaign together and the list narrows to deals matching both, not either.

Not complete is scoped to Live deals only: it means a deal that has reached Live but is still missing and unexplained on one or more of its four metrics, i.e. the ones worth chasing, not every unfinished deal in the pipeline.

- **Any date** — no date filtering.
- **Upcoming** — not posted yet, expected today or later.
- **Overdue** — not posted, and the expected date has already passed.
- **Date range** — pick a From and To. A deal is judged on its actual post date, or its expected date if it has not posted.

> ⓘ YOUR FILTERS STAY PUT
>
> Filters survive going into a deal and coming back — they only reset when you clear them yourself with **clear all filters**. And a deal you edit **stays where it is** in the list: the order is the order deals were added, so nothing jumps to the top while you are reading.

> ⓘ "NEW DEAL" MAKES AN ENGAGEMENT
>
> The orange **+ New Deal** button creates a new engagement (deal and engagement are the same thing here). Click any row to open that engagement and work it.

New Deal

`/engagements/new` MARKETER LEAD ADMIN

New Deal creates an engagement: pick the influencer and enter the deal terms. The page is laid out as three numbered sections, and the new deal starts at **Proposed**, waiting for approval.

WHAT IT'S FOR	READ OR ACT?	WHO	REQUIRED
Starting a new influencer deal.	Action: creates an engagement.	MARKETER LEAD ADMIN	An influencer.

Picking the product

The list offers one entry per sellable variant, and *only* sellable ones — remotes are deliberately not in it. A remote carries no colour or size, so it used to appear as a bare product name sitting next to the real variants (a plain "Ghost" beside "Ghost · Underground · White"), and picking it saved a remote against the deal with the variant box left empty. Every option you can now pick carries its full variant.

Start typing in the **Product** box and pick from the list. Picking fills in *both* boxes — the product name in Product, the model and colour in **Variant / colour** — and pulls in the cost, so **Goodies** fills itself where we know what the item costs us. The selling price shows underneath with a **use** button, so you never have to go and look it up.

⚠ THE PRODUCT BOX IS PICK-ONLY

You can no longer type a product name that is not in the list. If what you type does not match a real product, the row shows an error and **Create deal** stays disabled until you pick a real one. If the product does not exist in the catalogue yet, it has to be created there first — a product needs its own listing (with an EAN) before anything can ship to an influencer, so a deal cannot get ahead of that.

ⓘ OLDER DEALS WITH A TYPED-IN PRODUCT STILL WORK

This only applies going forward. A deal that already has a typed-in product name from before still opens and still saves normally — you only have to fix it if you actually change that field on that deal.

⚠ THE WOODEN KITS HAVE NO COST ON RECORD

Goodies will not fill itself for the Harry Potter crests, the Wooden Garages or the other L.O.T Build items — we hold no cost for any of them — so type the figure in. The selling price is still shown underneath to save you looking.

A blank here means we genuinely do not know the cost, which is the honest answer. It is better than the alternative: the three Wooden Garage sizes previously all showed the same figure, which turned out to belong to a different product entirely, so the number never changed when you switched size.

Creating a deal

1. **1 Influencer.** Search by code, handle or name (type at least two characters) and pick from the results with the mouse or the ↑ ↓ keys and Enter (the same picker is used in the New deal pop-up on an influencer or engagement). Use **Change** to reselect. If you arrived from a **Re-book** button on the Dashboard, the influencer is already selected for you.
2. **2 Deal terms.** Choose the engagement type (Video or UGC), then a **deal type card**: **Paid** (flat fee), **Barter** (product only), **Affiliate** (commission %) or **Paid + Affiliate** (fee plus commission). Fields that do not apply to the chosen type, such as the payment amount on a barter deal, are dimmed with a dash. Then set payment terms and amount, affiliate %, expected post date, campaign (or start a new one on the spot), the **Owner** (required: pick someone from the influencer team), and where the deal drives traffic (Website, Amazon, Flipkart).
3. **3 Products.** Pick the product and variant lines, as described above.

The bar at the bottom shows the fee and the number of product lines. Press **Create deal**: the deal is created at stage **Proposed** and opens on its detail page, where it needs approval before it can move on.

ⓘ ONLY THE INFLUENCER IS REQUIRED

You can create a deal with a ₹0 amount and a blank product and fill them in later; the only thing you must pick is the influencer. The search shows nothing until you have typed two characters, which is normal. Every new deal begins at the start of the pipeline and is advanced step by step afterwards.

Working an Engagement

`/engagements/detail` MARKETER LEAD ADMIN

The engagement detail screen is the control centre for one deal: its terms, product, costs, logistics and performance, plus the controls to advance the pipeline, add notes, and flag damage to customer support. This is where most of the work happens.

WHAT IT'S FOR	READ OR ACT?	WHO	PIPELINE
Running one deal end to end.	The main action screen.	MARKETER LEAD ADMIN	7 on the happy path, 3 exits, 2 holds.

The layout

The header shows the engagement number, the influencer, the current **stage** and **deal** badges, a **Complete** or **Incomplete** pill once the deal is Live, and two buttons: **Advance** and **Flag Damage to Pitstop**. A metric with a reason recorded on the per-video **Performance** card counts toward Complete even without a number entered. A pipeline stepper shows progress. Below sit cards for Deal Terms, Product, **Influencer**, **Payments**, Costs (with the rolled-up **total** in orange), **Ads**, Logistics, Post-live and Performance (one tab per video, deal totals, sales per ₹1), followed by Notes and a History log. Notes show who wrote them and the History log shows who made each change, by name. Next to the pipeline stepper, a deal that has been approved reads **"Approved {date} · by {name}"**.

Complete is a derived flag, not a stage

Live is still the final stage — nothing about a deal moves when it becomes Complete. Complete is worked out, not clicked: a deal reads Complete once it is at stage **Live** and four things have all been answered — **Views** (greater than zero), **Likes**, **Followers gained**, and **Cost** (a total cost greater than zero). A number is one way to answer; a recorded reason is the other. If you note on the Performance card why a metric will never exist — Internal gap, Gated data or System timing — that metric counts as answered and the deal can be Complete without it. **Cost is the exception:** a reason never completes Cost, because an uncosted deal is a different problem from a number the platform will not show us. The pill sits next to the stage and deal-type badges in the header: a green **Complete** pill when all four are answered, or a muted **Incomplete · missing: …** pill naming exactly which are still blank with no reason given. Nothing shows before the deal reaches Live — an unposted deal has no numbers to be missing yet.

Entering the missing numbers in the **Performance** card flips the pill immediately, with no reload, because it is read straight from the same deal data the page already holds. Since 4 Sep 2026 a deal

can carry more than one video: Views, Likes and Followers gained are now the **sum across every take**, so the pill reads the deal totals, not any one video's numbers.

> ⓘ WHY A FLAG, NOT A STAGE
>
> Reann originally asked for a Complete stage. It was built as a derived flag instead so the stage vocabulary does not grow, and so nothing has to be clicked to mark a deal done — entering the numbers *is* marking it done.

> ⓘ HISTORIC LIVE DEALS WERE BACKFILLED ON 11 SEP 2026
>
> Followers gained had never been entered on any deal, so every Live deal read Incomplete. On 11 Sep 2026 every already-live deal had Followers gained marked with the reason **Internal gap**, which answers the question without a number and lets those deals read Complete. New deals still need a real number or a declared reason as they go live.

Complete locks the deal terms

Since 11 Sep 2026, a deal that reads **Complete** also **locks**: **Deal Terms**, **Costs**, **Post-live**, **Products** and **Compliance** go read-only, each showing a small locked note in place of its Edit button. Everything else on the page stays open — **Performance**, payments, notes, stage, owner, logistics, codes and the Ads card can still be changed on a Complete deal. A lock banner appears in the header: **"This deal is complete and locked. Metrics stay editable."**

There are two ways back to editable. The first is on you: clear a metric or its declared gap reason in Performance, which makes the deal Incomplete again and the lock falls away on its own. The second needs approval rights (the same people who can Approve a deal): press **Unlock for edit** in the header banner, optionally with a reason. That opens a 24-hour window, shown as an **"Unlocked"** banner naming who unlocked it and until when, and every unlock is logged. **Lock again** in that banner ends the window early. If nobody presses Lock again, the window simply expires on its own after 24 hours.

> ⓘ WHO CAN UNLOCK
>
> Marketers without approval rights see *"Unlocking is with Reann"* in place of the button, the same pattern as Approve. Ask whoever holds approval rights to unlock the deal if a locked field genuinely needs fixing.

> ⚠ A LIVE DEAL MISSING COST OR VIEWS GETS FLAGGED
>
> Once a deal is **Live**, a banner appears at the top of the page if **Cost** or **Views** is missing — the video is publicly up but its numbers were never entered, and without them CPM and cost-per-video cannot be worked out. It is a warning, not a block: the deal still saves and advances normally. Fill costs in the **Costs** card and views in the **Performance** card to clear it.

Deal Terms also records **ad rights**: whether the creator has agreed we may run the video as a paid ad, what we paid for that specifically, and how long we may run it. The amount is separate from the

creator's fee and counts toward the deal's total cost. Ad rights shows a dash until someone answers the question — a dash means *nobody has recorded it*, which is not the same as No.

The **Influencer** card repeats who the deal is with — handle, name, phone, email, location, platform, type and follower count — so you can check you are looking at the right person without opening their profile. It is read-only; edit the creator on their own page.

The **Payments** card shows what has been paid against this deal and what is still owed, and every payment carries its **screenshot**: click it to open the proof. **+ Record** logs a new payment with the creator and deal already filled in. The separate Payments page is still there for spend across all deals.

The Performance card: one tab per video

Since 4 Sep 2026 a deal can carry more than one video (Reann asked for 2 to 3 takes under one deal, so a second posting no longer has to pretend to be a separate deal). The card shows a row of tabs, **Video #1**, **Video #2** and so on, one per take that has been added. **Edit** opens the take currently selected and its own metrics: link, posted date, views, paid views, likes, comments, shares, reposts, saves, followers gained, followers at post date, and (where the deal drives traffic) impressions. A blank metric can carry a "why blank?" reason instead of a number, for the ones that genuinely were not tracked. Save writes that one take only, nothing else on the deal. **Posted date is required** as soon as the take has views or paid views; Save is blocked until it is set.

+ Add video sits at the end of the tab row and adds another take, up to a limit of **six videos per deal**; the button disappears once a deal reaches six. **Video #1** is the primary take: its link, posted date and followers-at-post-date are the deal's own, the same numbers the Post-live card shows, and it cannot be removed while any other take exists. Every other tab, while editing, shows a **Remove video #N** button that deletes that take; its numbers leave the deal's totals immediately.

> ⓘ SINCE 11 SEP 2026: VIEWS SPLIT INTO PAID AND ORGANIC
>
> **Views** is the platform total for that take. **Paid views** is the slice an ad bought — type it, or leave it, and once an ad on that take is synced from Meta it fills in on its own. Underneath, the card shows **Organic views**: views minus paid, worked out for you, not a field you type into. Paid views can never be more than Views; Save is blocked until that is fixed. A take with no ad on it simply leaves Paid views blank, which reads as fully organic. **CPM and every performance ratio use organic views, not the platform total** — so a heavily-boosted video does not make its CPM look artificially cheap.

> ⚠ FOLLOWERS AT POST DATE IS REQUIRED ONCE ANY NUMBER IS ON THE TAKE
>
> A take with only a link and a posted date can be saved with nothing else filled in. But the moment any number is entered on that take — views, likes, comments, shares, reposts, saves, impressions, followers gained or paid views — **Followers at post date** stops accepting a "why blank?" reason and Save stays disabled until it too has a number. It cannot be recovered later, so it has to be captured while you have it, or that take loses it for good. This applies per take, not once per deal.

Owner

The **Owner** card shows who on the influencer team is taking the deal forward (this used to be called the POC). With manage access you can change it from the drop-down; the change is logged in History. About 280 older deals have no owner yet: the card says so, and picking one there fills it in. The list is the Podium Influencer department, limited to people with Ignition access.

Deal totals: the rollup below the tabs

Deal totals sits under the tabs and shows the deal's own numbers: views, likes, comments, shares, reposts, saves, followers gained and impressions are now the **sum of every video take**, and are no longer typed directly here. **Edit totals** only opens Sessions, Orders and **Sales (coupon, net)** ₹, which stay deal-level and are not attached to any one video. On a deal with an affiliate code, Orders and Sales fill in from the code sync. The card shows **Sales per ₹1** (coupon net sales divided by spend) instead of ROAS. The engagement ratios and CPM are all recomputed from these totals, and since 11 Sep 2026 they are computed on **organic views** (views minus paid views), not the platform total.

> ⓘ VIDEO #1'S POSTED DATE IS THE DEAL'S
>
> Video #1's posted date is the deal's posted date — the Post-live card and the Video #1 tab show the same date, and editing it in either place updates both. The video link is edited on the Video #1 tab; the Post-live card only displays it. The Post-live card's Tracking link is a different thing entirely (the deal's UTM link for the store).

The Logistics card: hand-entered fields plus live courier status

The **Logistics** card starts with the fields someone typed in: **Shipping order**, **Tracking**, **Shipping date** and **Delivered**. Since 10 Sep 2026 the card also shows, alongside those, what the courier itself is reporting: a **Courier** row with a lifecycle badge (Pending, Manifested, In transit, Out for delivery, **Delivered**, **RTO** or Cancelled) and the courier's name, an **AWB** row with the tracking number (a live link to Delhivery's public tracking page for Delhivery parcels, plain text for everyone else, because there is no page to send other carriers to), and **Dispatched** / **Delivered (courier)** timestamps, in IST. This is all read straight from the courier feed; it never overwrites the hand-entered fields above it.

A small **"matched by order prefix"** note means the typed Shipping order had something extra on the end (for example `#LOT43838 Complete`) and the match was made on the order number inside it. The data itself is real; the note exists so nobody assumes it was an exact match.

Two states show as plain grey text rather than a badge: **"Awaiting courier sync"** means there is an order number but the courier feed has not reached Ignition yet, which is normal for a deal created in the last few days. **"Sent via Porter — no tracking"** (or DTDC, or any other name) means the Shipping order field holds a courier name rather than an order number, because the parcel was hand-delivered or sent by a courier outside the feed. Neither is an error and neither needs fixing.

⚠ STAGE AND COURIER STATUS ARE DIFFERENT THINGS, AND WILL OFTEN DISAGREE

The deal's **stage** tracks the content deal (Shipped, Live, Posting and so on). The courier's **lifecycle** badge tracks the parcel. A deal at **Live** with a parcel reading **Delivered** is completely normal — the video went up and the box also arrived. **Never change a deal's stage just to make it match the courier.** An **RTO** means the parcel came back to us and the creator never received it at all; that is a real problem to decide on, not something to fix by clicking a stage.

The tracking link

Every deal can carry its own **tracking link** — a short `lottoys.in` address that sends the customer to Legend of Toys and records that the visit came from *this* creator and *this* deal. It appears in the **Post-live** card, in full, with a **copy** button, because the whole point is to hand the string to a creator.

A deal gets one automatically when it reaches **Shipped**. For older deals, or if one is missing, click **Create tracking link**. The link points at the **product page** whenever we can work out which product the deal is for, and at the shop otherwise. Picking the product from the dropdown when you create the deal is what makes that certain; if it was typed by hand we still match it to the catalogue where the name is unambiguous. Where two different products could be meant, the link deliberately goes to the shop rather than risk sending a creator's followers to the wrong page.

⚠ GIVE THE CREATOR THIS LINK, NOT THE SHOP ADDRESS

A plain link to the website cannot be told apart from anyone else's traffic. Only the tracking link credits the visits, and any resulting orders, to the creator who sent them. Once a creator has posted it, it must not be changed — it is already out in the world on their page.

THE LINK OPENS THE DEAL'S OWN COLOUR

The link lands on the exact colour saved on the deal, not just the product page. This matters because a product's colours all share one page on the website, so a link that only names the product opens whichever colour the shop lists first — a Tarmac Purple deal would have shown Tarmac Black.

Set the product before you create the link. If the product on a deal is changed *after* the link exists, the link keeps pointing where it was first sent, and Ignition cannot move it — the **Create tracking link** button only appears while a deal has no link. The link itself stays valid, so anything already shared keeps working.

⚠ A STALE LINK NOW WARNS YOU, ON ITS OWN

If the tracking link was minted and the deal's product changed afterward, a banner appears right under the link showing where it currently points and where the deal now points. Ignition still cannot repoint it: every target change is recorded against a named person, so fixing it is done in **Relay → Links**, not here. The banner links straight there.

The Ads card: boosting a video as a paid ad

Since 11 Sep 2026 the **Ads** card, below Costs, tracks running a deal's video as a paid Meta ad — separate from the organic post itself. Each row is one ad and boosts **one take** of the deal's video (pick it from the **Take** dropdown), plus **Platform** (Instagram, Facebook, or both), **start** and **end** dates, an optional **Meta ad id** and a note. **+ Add ad** starts a new one; **Edit** and **Delete** manage an existing one.

Two separate things are tracked on every ad, and they do not always agree:

- **Approval** — Legend of Toys's go-ahead to run it. Only people with approval rights (the same rights that approve a deal) see **Approve**, **Reject** and **Back to pending**. **Approve stays greyed out, with the date shown, until 10 days after that take posted** (in IST) — there is nothing to click early, and the card tells you exactly which date it opens.
- **Run status** — what the ad is actually doing: **Not started**, **Running** or **Ended**. You cannot hand-set an ad to **Running** until it is approved; the option is disabled and marked "(needs approval)" until then. Meta's own reporting can still show an ad running that was never approved here — that shows as a red **"running without approval"** flag on the row, a warning to go sort out, not something Ignition blocks.

Refresh from Meta (once any ad on the deal has a Meta ad id) pulls status, spend, views and impressions from Meta for every ad on the deal and shows when each last synced; a sync older than 36 hours is flagged as stale, meaning the daily automatic sync has stopped reaching it.

> ⚠ AD MONEY IS OUTSIDE THE INFLUENCER BUDGET
>
> What is paid here, and any Meta spend, is **never** part of this deal's total cost, its CPM, the monthly budget or the Payments page. The Ads card totals its own spend separately at the top of the card. The **Costs** card no longer has an Ad spend field to enter — that input was retired on 11 Sep 2026; ad money now lives only here.

Ad payments, underneath the ads list, is money paid to the **creator** for ad rights or usage — a different thing from Meta spend, which is what Legend of Toys pays Meta to run the ad. **+ Record** logs a payment: amount, **Pending** or **Paid**, optionally linked to one ad, with a note. Marking one **Paid** requires a **screenshot** of the payment, the same rule as the deal's own Payments card; click **screenshot** on any row to view it. **Back to pending** and **delete** are also available.

> ⓘ THE ADS CARD IS NEVER LOCKED
>
> Unlike Deal Terms, Costs, Post-live, Products and Compliance, the Ads card and its payments stay editable even on a Complete, locked deal — ads typically run after the video is already up and the deal has completed.

The deal brief

Preview brief (in the header) writes a draft of the collaboration email for this deal: what we are sending, the posting date, the tracking link, the discount code, and what we would like the creator to include. It

also warns you up front if the influencer has no email address on record, or the deal has no tracking link, code or expected post date.

> ⓘ IT IS A DRAFT, AND NOTHING SENDS IT
>
> Ignition cannot email creators. The brief is there to be read, argued with and copied out — use **Copy brief** and send it yourself. The wording is a starting point and is expected to change.

Approving a proposed deal

A deal sitting in **Proposed** cannot move on until it is approved. Since 26 Aug 2026 that is the Marketing head's decision alone; everyone else sees *"Approval is with Reann"* where the button used to be, and keeps every other control. A deal you are turning down can still be dropped or ghosted without approving it first.

Approving now moves the deal for you. Since 27 Aug 2026 a deal you approve goes straight to **Planning** (a UGC deal goes to **Outreach**) — you no longer approve it and then advance it as two separate jobs.

Advancing the deal

Click **Advance** to open the **Move to...** window. It works in up to two steps:

1. **Pick the stage.** A grid shows every stage you can move to; the next stage on the happy path is marked **NEXT**. Choose one and add an optional note. If you are skipping stages it warns you but lets you continue. A stage that needs nothing extra has an **Advance** button right here; otherwise the button reads **Continue**.
2. **Fill in what that stage needs.** Only the fields the deal does not already hold are asked for. **Live** asks for the video link, the video posting date and, if the influencer is unrated, a Green, Yellow or Red rating. **Shipped** asks for the Shopify order id (a UGC deal asks for a tracking link instead). **Scheduled** asks *Is it on track?*: **On track**, or **Delayed** with a revised post date, which moves the deal to the Delayed stage and keeps the original date in the history. **← Back** returns to the grid.

The happy path is **Proposed, Planning, Shipped, Delivered, Draft received, Scheduled, Live**, and **Live is the finish line** — the video is up, the deal is done. A deal that falls through exits to **Ghosted**, **Dropped** or **Cancelled** (use Cancelled when the deal was called off before anything was spent — it keeps the record but stays out of every spend and CPM total); **On hold** and **Delayed** hold a deal that has stalled without dying. You may move to any stage in any order — the one thing you cannot do is leave Proposed without an approval.

> ⓘ "AGREED" IS GONE
>
> The old **Agreed** stage was retired on 27 Aug 2026: approving a deal is now the go-ahead, so the stage was saying the same thing twice. Deals that were sitting on it moved to **Planning**. Old history entries still read "Agreed" — that is the record of what happened at the time, not an error.

ⓘ YOU *CAN* SKIP STAGES — ON PURPOSE

Real deals do not queue politely, so Advance lets you move to any stage in any order. If you skip past a stage on the happy path it simply warns you and lets you continue. Terminal stages are not dead ends either: reopening a ghosted or cancelled deal clears its closing date and puts it back in play. Notes you add and every stage move are recorded in the History log.

⛔ FLAGGING DAMAGE OPENS A REAL SUPPORT TICKET

Flag Damage to Pitstop opens a genuine ticket in the Pitstop customer-support system, prefilled with this deal's influencer info, with a disposition (replacement, refund or repair) and a required description. This is a deliberate manual handoff, used when a product sent to an influencer arrives damaged. Only one Pitstop ticket can be opened per engagement; once raised, its number shows in the Logistics card.

Payments

`/payments` MARKETER LEAD ADMIN

Payments is the running log of what we have paid influencers, deal by deal. Every advance and balance payment goes here, so the totals at the top always show what has gone out today, this week, this month and all time.

WHAT IT'S FOR	READ OR ACT?	WHO	TIED TO
Logging influencer payments.	Read the log; record payments.	MARKETER LEAD ADMIN	Always a specific deal.

The layout

Four spend tiles sit across the top: **Today**, **This Week**, **This Month** and **All Time**. Each shows the total paid in that window, the number of payments, and how many different influencers they covered. Below them is the log itself: one row per payment, newest first, showing the date paid, the influencer, the deal, the **kind**, the amount, and any note. The deal in a row links straight to that engagement.

The search box above the log filters the loaded payments; every word must match.

Recording a payment

1. **Open the form.** Click **Record Payment** in the top right.
2. **Find the influencer.** Search by code, handle or name (type at least two characters) and pick from the results with the mouse or the ↑ ↓ keys and Enter (results appear as you type). Use **Change** to reselect.
3. **Pick the deal.** Choose which of that influencer's deals the payment is for. If they only have one, it is selected for you. If they have none, the form tells you to create a deal first.
4. **Enter the details.** Choose the **kind** (Advance, Balance or Other), the amount, the date paid, and an optional note such as a transfer reference. Then save.

The three kinds

KIND	USE IT FOR
Advance	Money paid up front, before the work is delivered.

KIND	USE IT FOR
Balance	The remainder paid once the deal is done. (This kind used to be called Final; older payments show as Balance too.)
Other	Anything that is neither an advance nor a balance.

ⓘ A PAYMENT ALWAYS BELONGS TO A DEAL

You cannot log a loose payment against an influencer with no deal: pick the engagement it relates to. Payments recorded here also show up on that engagement's own page, where the Deal Terms card reads "₹X paid of ₹Y agreed", so the deal always reflects what has actually been sent.

⚠ REMOVING A PAYMENT CANNOT BE UNDONE

The trash icon at the end of a row asks *"Remove this payment record?"* first; confirm and the payment is deleted for good, with no undo, and the spend tiles drop to match. Cancel leaves it alone. Only remove a row if it was logged in error; to correct an amount, delete the wrong row and record the right one.

Schedule

`/schedule` MARKETER LEAD ADMIN

Schedule shows when deals are going live across the month: a calendar of every post that is either already up or expected, so you can see the content pipeline at a glance and spot quiet or crowded weeks.

WHAT IT'S FOR	READ OR ACT?	WHO	VIEWS
When deals go live, by month.	Read-only.	MARKETER LEAD ADMIN	Calendar · List.

Who is overdue to post

Above the calendar, a strip counts the creators who were sent something **10 or more days ago and still have not posted**. Click it to see who, how many days it has been, and whether they have an email address and a tracking link on record. Clicking a row opens that deal.

Since 10 Sep 2026 this clock counts from **when the courier actually delivered the parcel**, where that is known, rather than from whenever someone last clicked a stage button. A creator who does not yet have the product in hand no longer shows up here just because the deal was clicked to Delivered early.

> ⓘ IT LISTS, IT DOES NOT CHASE
>
> Nothing is sent automatically — this is the worklist you work by hand. The strip disappears when nobody is overdue.

Two more panels: parcels that need a different action

Above the chasing list sit two more panels, both driven by the same courier feed as the Logistics card on the engagement detail page:

- **"N parcels came back — the creator never received the product, so do not chase"** — every RTO or cancelled parcel, newest first, with how long ago it came back. These need a decision (re-ship the product, or drop the deal), not a reminder, so they are shown regardless of age: a fresh one is the most actionable one.
- **"N parcels still in flight after 14+ days — chase the courier, not the creator"** — the parcel is genuinely stuck in transit. The right action is a courier escalation, not a nudge to the creator, who is waiting on the same box you are.

⚠ THESE THREE LISTS ARE MUTUALLY EXCLUSIVE ON PURPOSE

A parcel that came back or is still stuck in transit is deliberately kept off the “overdue to post” strip — the creator has nothing to post yet, so chasing them for a video would be chasing the wrong person. Work each panel with the action it names.

Moving around

The header carries the month name with arrows either side to step back and forward a month, and a **Today** button to jump back to the current month. On the right, two toggles switch between the **Calendar** and the **List** view of the same month. A counter shows how many posts fall in the month you are looking at.

Posted vs planned

Each deal appears on its **go-live date**. If the post is already up, that date is its real post date; if it is still upcoming, the date is the expected post date. A small dot tells the two apart:

DOT	MEANING
Filled (orange)	**Posted** — the video is live, dated by its real post date.
Hollow (outline)	**Planned** — expected, dated by the date the deal is due to go live.

The two views

In the **Calendar** view, each day cell lists the influencers posting that day; today’s cell is tinted. If a day has more than four, it shows the first few and a “+N more” line. In the **List** view, the same deals appear as rows with date, deal, influencer, product, stage, whether each is posted or planned, and a link to the video where one exists. In either view, clicking a deal opens its engagement.

ⓘ ONLY DATED DEALS SHOW HERE

A deal appears on the Schedule once it has a go-live date, whether expected or actual. Deals that have no date yet simply do not show up until one is set on the engagement. To change when something lands, set its date on the deal itself, not here.

PART 3

Lists

The proven roster, parked candidates, UGC pipeline, campaigns and discount codes.

Roster

`/roster` MARKETER LEAD ADMIN

The Roster is the proven-influencer list: every creator who has at least one deal that has shipped or moved beyond shipping. Open it to find vetted creators and check their quality rating before giving them new work.

WHAT IT'S FOR	READ OR ACT?	WHO	INCLUDES
Finding proven creators.	Read; click through to a profile.	MARKETER LEAD ADMIN	1+ shipped-or-later deal.

Using it

Each row shows the influencer code, channel, type, reach, how many engagements they have, and their **rating** badge. Filter with the chips: All, Green, Yellow, Red, Unrated. The counts on the chips are exact on All. The search box filters the loaded roster; every word must match. Click a row to open the creator's profile.

> ⓘ **PROVEN ONLY**
>
> The Roster lists every creator with at least one deal at Shipped or later, so brand-new or earlier-stage-only creators will not appear here (find those under Influencers or B-List).

B-List

`/blist` MARKETER LEAD ADMIN

The B-List is the parked-candidates list: creators who are interested but not a current priority, a “maybe later” bench. Open it to revisit prospects you have talked to but are not actively pursuing.

WHAT IT’S FOR	READ OR ACT?	WHO	INCLUDES
Parked, lower-priority prospects.	Read; move creators to Master.	MARKETER LEAD ADMIN	Influencers on the B-List.

Using it

Each row shows the code, channel, type, reach, and a **Comments** column noting why the creator is parked. Click a row to open the profile. People who can manage deals also see a **Move to master ↑** button on each row: press it, confirm the prompt, and the creator leaves the B-List and joins the Master list, ready to pursue.

> ⚠ **B-LIST MEANS “PLAN B”, NOT “BANNED”**
>
> Despite the name, the B-List is a bench of interested-but-not-yet-aligned creators, not a blocklist. It is where you keep leads warm for later, not where you put people you will not work with.

UGC Pipeline

/ugc MARKETER LEAD ADMIN

The UGC Pipeline tracks commission-based user-generated-content deals, where the creator is paid by results. It shows ad spend, commission and return on ad spend (ROAS) alongside each deal's stage.

WHAT IT'S FOR	READ OR ACT?	WHO	SHOWS
Watching UGC deals and their ROAS.	Read; click through to a deal.	MARKETER LEAD ADMIN	UGC engagements only.

Using it

Each row shows the engagement number, influencer, the current **stage** badge, the product, ad spend, commission, and **ROAS** (real return on ad spend, to two decimals; UGC pages keep ROAS while the rest of Ignition uses Sales per ₹1). The list is filtered to UGC deals automatically. Click a row to open the engagement and edit its numbers.

> ⓘ "₹0" USUALLY MEANS NOT ENTERED YET
>
> Ad spend and commission default to ₹0 and ROAS shows a dash until measured, so an empty-looking row usually means the figures have not been entered yet, not that performance was zero. You enter those numbers on the engagement's detail page, not here. The list shows up to 200 rows.

Campaigns

/campaigns MARKETER LEAD ADMIN

Campaigns lists your named marketing campaigns. A campaign has an optional budget and spans many deals and influencers, so you can see what a push has spent against what you set aside for it.

WHAT IT'S FOR	READ OR ACT?	WHO	STATUS
Named campaigns and their spend vs budget.	Read, plus New campaign.	MARKETER LEAD ADMIN	Live.

Reading it

Each card shows the campaign name and number, its status, how many linked deals have posted (for example 2/5), **Consumed** spend against the budget with a progress bar, organic views and orders. The bar and percentage appear only when a budget is set; a blank budget is never read as ₹0. The search box above the list filters the loaded campaigns by name or number. **New campaign** asks for a **name** and an optional **budget**, then opens the new campaign. **Click a card to open the campaign**, where you get its rolled-up numbers (linked deals, how many have posted, total spend, views, orders, **Blended CPM** and **Median CPM**) and can attach or detach deals. In **Link deal**, type a deal number or influencer to search, then click a row or use the ↑ ↓ keys and press Enter to link it; Enter does not pick a row for you, and a deal already linked says so. **Edit** changes the campaign's **Name**, **Budget** (leave blank for no budget) and **Status**. A cancelled deal's spend is shown struck through in the deals table and is not counted in **Consumed**.

The campaign brief

Each campaign has a **Campaign brief** slot: press **Upload brief** and pick the file you want the creators to work from. It is stored privately — the link the app opens is short-lived, so the brief is never a public URL — and you can **Replace** it whenever the brief is rewritten. The name and upload date show next to it, so it is obvious when a campaign is running on an old brief.

Discount Codes

`/discount-codes` MARKETER LEAD ADMIN

Discount Codes shows the pre-minted code pool and which codes have been used, on which order, and against which engagement. Open it to check code usage.

WHAT IT'S FOR	READ OR ACT?	WHO	TABS
Seeing the code pool and usage.	Read-only.	MARKETER LEAD ADMIN	All · Unused · Used.

Naming an affiliate code

When you issue an **affiliate** code from a deal you can give it a name of your own — letters and numbers, at least three of them — instead of the generated one. Leave the box empty and a name is generated as before.

⚠ GIFT CODES ARE ALWAYS RANDOM, AND CANNOT BE NAMED

A gift code is a 100%-off order. A guessable one can be stumbled onto by a customer who was never given it, so they stay random by design and the naming box is never offered for them.

ⓘ AFFILIATE CODES TRACK, THEY DO NOT PAY

LOT's affiliate codes record the revenue a creator sent us. They do not earn the creator a commission, which is why no commission figure is shown against them.

Reading it

Each row shows the code, its pool, whether it has been **Used** (green YES, else a dash), the order it was redeemed on, the order value, when it was used, and whether it is tied to an engagement. Filter with the All / Unused / Used tabs.

ⓘ PRE-MINTED, AND VIEW-ONLY TODAY

Codes are minted into the pool in advance, not created here; a code becomes "used" when a customer redeems it on an order, which fills in the order, value and engagement link. Bulk generation of codes is a later phase, so this screen is read-only for now. The list shows up to 200 codes.

PART 4

Analyze

Spend and performance reporting.

Targets

/targets MARKETER LEAD ADMIN

Targets is where you set a views goal and a spend budget for each month, then watch how the real numbers track against them. It turns the month into a simple scorecard: are we on pace for views, and are we inside budget?

WHAT IT'S FOR	READ OR ACT?	WHO	SET BY
Monthly views & budget goals.	Read tracking; set targets.	MARKETER LEAD ADMIN	Manage access.

Setting a month

1. **Pick the month.** In the top panel, choose the month you are setting a goal for.
2. **Enter the goals.** Type a **target views** number and a **budget** in rupees, plus an optional note.
3. **Save.** The month appears in the tracking table below, and re-saving the same month overwrites it.

Reading the tracking table

One row per month shows the target views beside the **actual views** achieved, and the budget beside the actual **spend**, each with a progress bar. The current month is marked in orange. The actuals are not typed in: they add themselves up from the live deals and payments for that month, so the table always reflects reality without anyone updating it.

What the colours mean

BAR	READING IT
Views	Fills toward the goal and turns green once it reaches it. More is better.
Spend	Stays calm while there is room, shifts amber as it nears the budget and red once over. Less is better.

★ CLICK A ROW TO EDIT IT

Clicking any month in the tracking table loads its numbers back into the panel at the top, ready to adjust and save again. It is the quick way to nudge a goal without retyping the month.

Drilling into a month

The arrow next to a month expands it into what makes up the numbers: **Spend** (each deal's amount, linking to the deal), **Views** (each post, with the influencer and posted date; paid views show under each month, including videos with paid views but no total yet) and **Conversions** (orders and their value). Spend also has an **Unallocated** row above the table, for spend that has not yet landed against any month.

A deal with more than one video posted in different months has each of its takes counted in the month *it* posted, not the month the deal's first video went up — a second take that posts next month no longer overstates this month's total. In the Views drill-down, a take other than the first shows a small **#2** (or #3, and so on) after the influencer's name, with that take's own posted date next to it. Every month's rows still add up to that month's tile. Spend and conversions are unaffected: they stay deal-level, counted by the deal's own post date, or under Unallocated if it has none.

ⓘ TARGETS ARE PER MONTH, FOR THE WHOLE TEAM

A target covers the month as a whole, not a single influencer or product, and there is one set of numbers per month. Everyone can see the tracking; setting and changing the goals needs manage access. If you only see the table and not the set-a-month panel, your access is view-only, which is normal.

Reports

`/reports` LEAD ADMIN

Reports is the spend and performance analysis for a date range: how many deals, what they cost, what they returned, and which products and creators did best.

WHAT IT'S FOR	READ OR ACT?	WHO	RANGE
Spend & performance analytics.	Read-only.	LEAD ADMIN	30d · 90d · YTD · All.

Choosing the range

Four presets sit at the top right: **30d** (the last 30 days), **90d**, **YTD** (1 January to today) and **All** (everything on record). The page opens on **YTD**. The chosen preset is highlighted; you can also set the from and to dates by hand, in which case no preset is highlighted.

What it shows

Summary tiles give **Deals created**, **Deals posted**, **Total spend**, orders, **Sales (coupon, net)**, **Sales per ₹1** (coupon net sales divided by spend), **Blended CPM**, **Median CPM**, organic and paid views, likes and shares. **Blended CPM** is the cost of the deals that have views, divided by their organic views, times 1,000. **Median CPM** is the CPM of the middle deal. Commission and ad rights are left out of the cost. Panels below break the range down: **By influencer tier**, **UGC**, **Spend by month**, the **Sales per ₹1** and **CPM** distributions, **Spend by product**, and **Top performers**. If nothing falls in the range you see "No deals in range".

Which date each number uses

Deals created counts by the date the deal was created. Spend, orders, sales and likes use the deal's post date. Views use each video's own post date, so a month reads the same as on Targets. Dropped and ghosted deals count on their created date. The **Total spend** tile spells out what it includes (spend on dropped or ghosted deals, by created date) and what it leaves out (deals created in the range that have not posted yet).

Sync all

With manage access, a **Sync all** button sits at the top. It refreshes every active code from Shopify, affiliate codes first, and shows progress as it goes. **Keep the page open** until it finishes; if it stops,

press it again and it carries on. The **Sales** tile shows when the active codes were last synced. All active codes also sync by themselves every day at 08:40 IST.

> ⓘ **PERMISSION**
>
> Without the reports permission the page says access is denied. Ask an admin for the Lead role if you need it.

PART 5

Admin

Where user roles are managed, and how the legacy sheet is imported.

User Roles

`/admin/users` ADMIN

User Roles explains how Ignition's permissions work and where to manage them. Ignition does not manage accounts itself: it reuses the shared company roles, and assignment happens in Garage.

WHAT IT'S FOR	READ OR ACT?	WHO	MANAGE IN
Explaining where roles are set.	Read-only (reference).	ADMIN	Garage → Users.

What it tells you

The search box narrows the users table as you type; every word must match.

The page explains that Ignition uses the shared permission map, lists the five Ignition permissions (`ignition_view`, `ignition_manage`, `ignition_approve`, `ignition_admin`, `ignition_reports_view`), and notes the two bundled roles: **ignition_manager** (view, manage, reports) and **ignition_lead** (adds Reports). **Approval is admin-only** since 26 Aug 2026 — `ignition_approve` was moved off Lead so that final sign-off on a proposed deal rests with the Marketing head. Admins and super admins get everything automatically.

> ⓘ THERE IS NO USER TABLE HERE
>
> Despite the name, this screen has no "add user" controls. To actually change someone's access, go to **Garage → Users** and set their role there; it then takes effect across Ignition.

Sheet Import

`/admin/import` ADMIN

Sheet Import documents how the legacy “Omnipresent” influencer spreadsheet is loaded into Ignition. It is a reference runbook for the technical team, not a button you click.

WHAT IT’S FOR	READ OR ACT?	WHO	HOW
Documenting the data import.	Read-only (instructions).	ADMIN (technical)	A command-line script.

What it explains

The page lays out the one-time migration steps: place the latest `Omnipresent - Influencer.xlsx` in Downloads, run the import script from the workspace, which posts the rows into the database through one-shot import routines. The import is idempotent (re-running it will not create duplicates), and the routines are removed afterward.

> ⚠ NO UPLOAD BUTTON HERE
>
> Despite the name, there is nothing to click on this screen: it is a runbook for an engineer doing a data migration from the command line. For day-to-day work you will never need it; influencers and engagements are added through the normal screens.
