

Google Ads API - Tool Design Documentation

Fraternitas Ventures Private Limited (Legend of Toys) · legendoftoys.com · Manager account 191-030-2248

1. Purpose

Legend of Toys is a vertically integrated toy brand that manufactures its own products and sells across e-commerce, quick-commerce, marketplaces and retail. We operate an internal business-intelligence dashboard ("Odo") that consolidates sales and marketing performance from all of our channels into a single view for our leadership and marketing team. The Google Ads API tool described here is a **read-only connector** that pulls our own Google Ads spend and performance metrics into Odo so they can be reported alongside our other advertising platforms (Meta Ads, Amazon Ads). It is purely a reporting/analytics tool; it does not create, edit, or manage campaigns.

2. Users & access

The tool is for **internal employees only**. There is no public, client, or third-party access. The dashboard is served on an internal subdomain (odo.legendoftoys.com) behind Google Workspace login restricted to the legendoftoys.com domain. The Google Ads API token is used by our own backend service and is never exposed to end users.

3. Architecture & data flow

The connector runs as a serverless backend service (a Cloudflare Worker, "odoops") on a scheduled hourly trigger:

- 1 The service authenticates to the Google Ads API using OAuth 2.0 (offline refresh token) for a user who has access to our own accounts, together with our developer token.
- 2 It issues read-only GAQL reporting queries via **GoogleAdsService.SearchStream** against our own linked accounts (177-983-6707 and 925-678-9384) through our manager account 191-030-2248.
- 3 It retrieves campaign-level daily metrics, normalizes them, and stores them in our private PostgreSQL database (a marketing-facts table).
- 4 The internal Odo web app reads from that database to render spend / ROAS / conversion dashboards. No Google Ads data leaves our infrastructure.

4. API services and resources used

Service / method	Operation	Purpose
GoogleAdsService.SearchStream	Read only	Pull campaign-level daily performance metrics via GAQL
customer / campaign / metrics	Read only	cost, impressions, clicks, conversions, conversion value by date
Mutate / management methods	Not used	The tool never creates or modifies any entity

5. Scope, volume & data handling

We access only the Google Ads accounts that we own and that are linked under our own manager account. Request volume is low: a handful of reporting queries per account per day (well under a few dozen operations daily). Retrieved data is aggregated performance metrics only - no personally identifiable information is requested or stored. Data is held in our private database with access restricted to authenticated internal staff, and is used solely for internal performance reporting.

Summary: a self-built, internal, read-only reporting connector for our own Google Ads accounts, feeding an in-house marketing dashboard. No campaign management, no external users, no PII.
